HEMS v1.2.3 Configurator

Latest version of HEMS Configurator can be found under download folder.

home

Basic system overview.

1. Grid		
	From grid	Tariff (LO, HI, D-LO, D-HI) and power from grid in W
>	From grid	Imported energy by tariff in Wh
	To arid	Power exported to grid in W
<	To grid	Exported energy in Wh
2. Plants	•	
<	Produced	Produced power in W and energy in Wh
>	Consumed	Consumed power in W and energy in Wh
3. Storage system	S	
<	Sourced	Power in W and energy in Wh sourced from storage (battery)
>	Stored	Power in W and energy in Wh stored (to battery)
bargraph and % ¹	SOC	Battery State Of Charge
4. Consumers	-	
>	Consumed	Consumed power in W and energy in Wh

12:05		
[]	Status	Output status for managed consumers
bargraph ²	Analog out	Analog output value
click	Toggle	Click in frame toggles managed consumers output
long-press ²	Set analog	Long press on first consumer pops-up dialog for analog value set
5. Unknown sourc	e	
>	Sourced	Power in W and energy in Wh from unknown source
		all differences caused by power-sensor inaccuracy
6. Other consume	rs	
>	Consumed	Consumed power in W and energy in Wh by other (not measured) consumers
7. Temperature a	nd humidity	
	Temperature	Temperature in ^o C
	Humidity	Humidity in % RH
8. Page navigatio	n	
	Home	Home screen
	Power [W]	Power screen
	Energy [Wh]	Energy screen
	Timetable	Timetable screen
	Tariff	Tariff screen
	Limiter	Limiterscreen
	EV fleet	EV fleet screen
	IO mux	IO mux screen
	Settings	Settings screen
9. Exit		
	Exit	Close appliction

¹ only for eStore

² only for first managed consumer

power

Overview of current power distribution by source / consumer.

- 1. Sourced power
- Sourced power for each source
- Sums per source type

Total of all sourced power

2. Consumed power

Power for each consumer

3. Power distribution

Partial distributed power

4. Submeter (Blue outline)

Power meter is not part of internal circuit

HEMS Configurator v1.2.0									- 0
	Grid LO	Grid HI	Grid D-LO	Grid D-HI	PV plant			Unknown source	energy [Wh
					9 78			0	energy [wit

- 1. Sourced energy
- Sourced energy for each source
- Sums per source type

Total of all sourced energy

2. Consumed energy

Energy for each consumer

3. Energy distribution

Partial distributed energy

4. Submeter (Blue outline)

Power meter is not part of internal circuit

5. Energy since

Date and time since energy is recorded

6. Reset all

Long-press to reset all energy counters

Last update: 2021/11/17 12:05

timetable

Weekly timetable for managed consumers.

1. Managed load menu

Switch between managed loads

2. Enable checkbox

When un-checked timetable is not executed

3. Events grid

Events displayed in weekly grid (15 min resolution)

Click to select time and set event by clicking buttons below

4. Once actions (top priority timetable actions)

Actions are executed and then automatically cleared.

"Disable" action will just disable recurring action.

5. Recurring actions (low priority actions)

Actions are executed each week.

6. Analog out ¹

Action to set analog output. Analog actions are recurring.

7. Cloud optimization

When enabled (checked) cloud optimization is enabled.

¹ only for Consumer 1

tariff

Weekly tariff timetable for grid energy per tariff distribution.

1. Tariff grid

Graphical weekly timetable with tariffs.

Click to select term, click-and-drag to select multiple terms.

2. Low tariff dates

Set low tariff dates for holidays.

3. Low tariff

Set low tariff for selected terms.

4. High tariff

Set high tariff for selected terms.

lo tariff dates

Holiday dates when tariff is low

C I	🦉 HEMS - Set LO tariff dates 🛛 🗌 🗙

Energy	Energy delivered to EV
Duration	Session charging duration

Last update: 2021/11/17 12:05

io mux

Overview and configuration of input/output ports IO mux

) mux				
	Select input/output type	out mode normal		
	Digital-1	normal		
	Digital-3	normal		
	Digital-4	normal		
	Temperature sensor	normal		
	Linker reset	normal		
1014		normal		
	/	normal		
	Toggle consumer-1	normal		
	Toggle consumer-2	norwal		
IX2	Toggle consumer-3	normal 2		

1. Select input/output type

On the left side there are defined MC controller (MC-230) ports to which could be assigned MC-230 functions (digital, linker reset, router reset, etc).

Default settings are for e.g. QX0 \rightarrow digital 1 while digital 1 is defined for consumer 1 (settings page). It could be changed in a way to define new function role to QX0 port e.g. for linker reset

If it is selected Enable consumer at input IX0,IX1 or IX2 it means that dedicated consumer will be managed (ON/OFF) by input signal on IX0,IX1 or IX2. For example, thermostat signal is wired to IXO port and via IO mux defined "Enable consumer 1" to IX0. While thermostat is active, it is consumer 1 active as well and vice versa.

Limitations: one temperature sensor is allowed, one consumer could be managed by one input only

2. out mode

Managed consumer input/output mode (normal or inverted)

settings

Easy and intuitive system setup.

1. System settings

1. System settings						
[autodetect]		Click to find HEMS in local network				
	c	eStore serial number (automatically detected or can be entered manually).				
eStore	[] enable	When checked HEMS will read Grid, first plant and first Storage directly from eStore (so there is no need to duplicate power-sensor).				
	[detect]	eStore address is cleared and new eStore can be detected.				
	c	HIQ Home serial number (automatically detected or can be entered manually).				
HIQ Home	[] enable	When checked HEMS will read Grid power and energy from HIQ Home (so there is no need to duplicate power-sensor).				
	[detect]	HIQ Home address is cleared so new can be detected.				
Virtual grid PS	[] enable	Check if system is without main grid power meter. Energy, power and currents are calculated from other power meters.				
2. Modbus cycle time						
Modbus cycle time	Modbus cycle time Time in ms for modbus communication to complete reading of all connected devices.					
3. Sources and Consum	ners setti	ngs table				
SOURCES	Source na	ame				
icon	Source ic	on				

4. Device status			
Status	Status OK, Warning, Error, Detected		
5. Device message		in, warning, Error, Detected	
	Source or consumer power-sensor management		
source and consumer management			
6. Device configuration	message Messages regarding source or consumer power-sensor		
	add	Associate new power-sensor to source or consumer	
Configuration	auu	Disassociate power-sensor from source or consumer &	
	del	configure it as new power-sensor	
7. Device type			
meter	Source or consumer power-sensor type		
configuration	in/ex	Power plant connection ¹	
8. Submeter option			
sub	Check if this power meter or device is not part of internal circuit. Energy division for this device is ignored and outlined in blue border.		
9. Wireless settigs	•		
new device	Power-sensor configured as new one detected or wireless module configuration ²		
Wireless setting	Setting up wireless modules: pairing, adding and delete the wireless modules and setting repeater level		
10. Device output	-		
output	Select consumer output type		
	<<>>	Set repeater level ³	
man. time	Managed consumer manual override timer		
P nominal	Enter consumer's power in Watts. It is disabled if there is assigned power sensor to this consumer.		
clock	Enable timetable		
11. Permanent memory	, parame	eters	
[init parameters]	Init all parameters to default values		
[save parameters]	Save all parameters to permanent memory		
[read parameters]	Read all parameters from permanent memory		
[] autosave parameters	Parameters will be automatically saved to permanent memory in 15 minutes after last parameter change		
12. Backup / Restore to	PC		
[backup]	Backup all parameters to PC ⁴		
[restore]	Restore all parameters from PC backup ⁴		

¹ only for the first power plant

² wireless setting must be enabled

³ only for wireless modules and wireless setting must be enabled

⁴ older versions of backup files may be used. Any unsuccessfully backed or restored parameters will be displayed but operation will end successfully if you use **continue**.
