

# HIQ designing

Presented electric wiring plans were made with the help of [Elwin](#) software which is made by [3xM Automation company](#). New plans can be made with modification of included [Elwin project](#) or with modification of [DXF plans](#) with any DXF capable program. With the Elwin project, all HIQ symbols are included. The whole design plan can be also downloaded as a [PDF file](#).

## Page 1- Power distribution-RCD switch and power meter

Single phase power input, connection of RCD switch (Residual Current Device) and [power meter](#). Input can be single or three phase.

The [power meter](#) on the wiring plan is connected to measure the whole electricity consumption, but can be connected to any device (or group of devices). Only single phase electricity measurement is available.

# Page 4 - Control System-Power supply, HC, CAD-232

24V power supply (PS) for control system, Home controller and CAD-232-A2-IQ.

24V power supply can be optionally used for LED lighting (up to 2.5A with serial power supply, larger power supply can be used).

Home controller (HC) is the heart of the system. It is connected to the network (ETH) and has optional inputs (connections are on page 15) and outputs (connections are on page 16).

CAD-232-A2-IQ expander is used as communication interface between home controller and power meter (If power meter is not used then the expander is not necessary). It is connected to a home controller through IEX bus, to COM2 on home controller input and to power meter (RS485 communication).

# Page 5-6 - CS-Light controller 00 and 01

Light controllers (LC) are connected to IEX bus, we can connect up to up 4 LC to 1 home controller. On the top side are inputs and on the bottom side are outputs (connections are on page 17-24).

# Page 7 - CS - Light dimmer

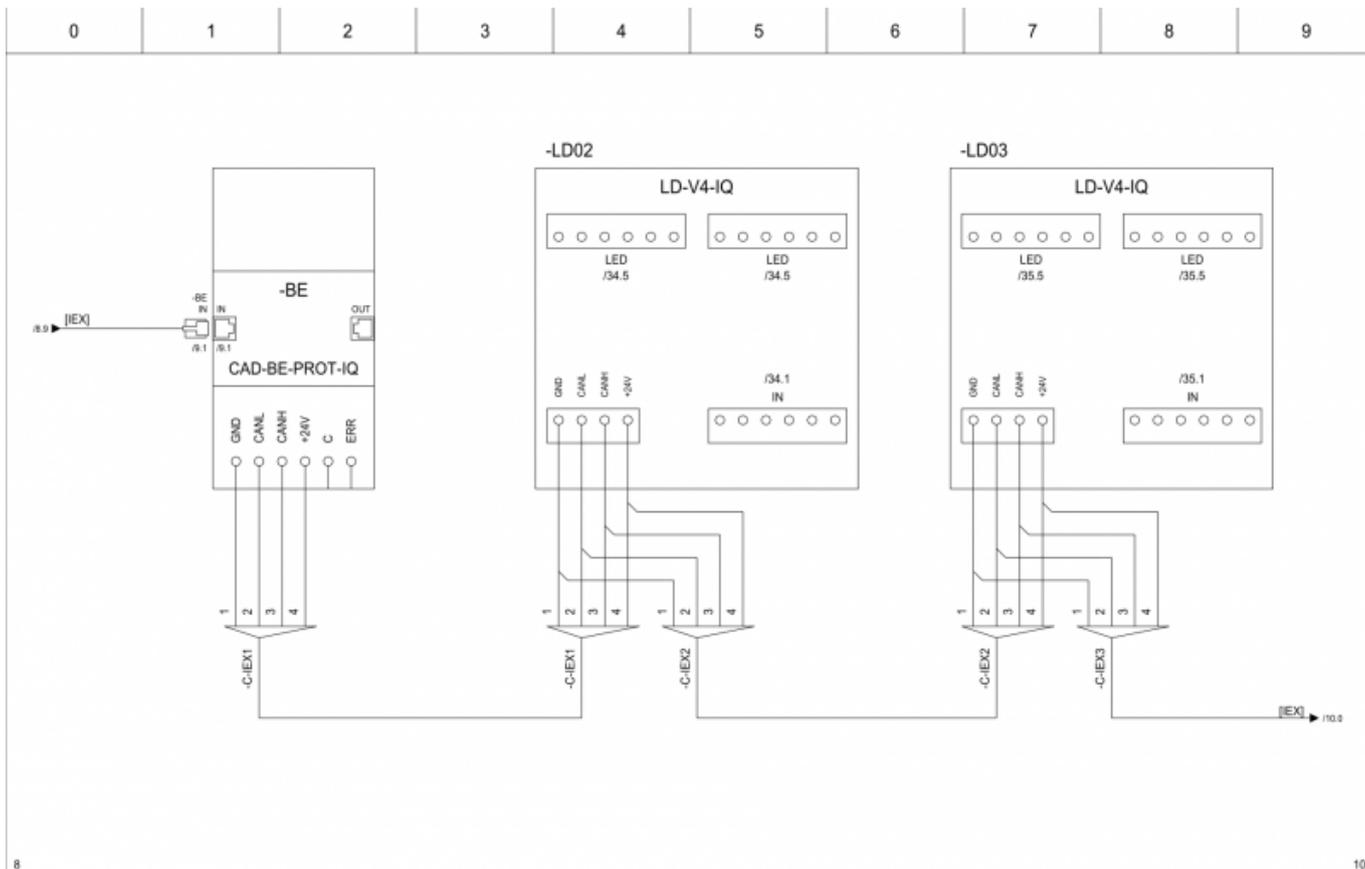

Up to 4 light dimmers can be connected to 1 HC. On sample plan we use 2 [Light dimmers drivers](#) for LUD-12 universal light dimmers.

# Page 8 - CS - Blinds controllers

Up to 2 [Blinds controllers \(BC\)](#) can be connected to 1 HC.

## Page 11-12 - CS - Thermostats

Up to 5 Thermostats can be connected to 1 HC. On sample plan we use 5 [Touch buttons electronic thermostats](#), but also ordinary [Electronic thermostats](#) and [Blind electronic thermostats](#) can be connected in a similar way.

Optionally we can connect window switch on each thermostat (sample on -TH02 and -TH03) (not possible with [Blind electronic thermostat](#)).

## Page 15 - Home controller inputs

If used, optional [lightness sensor](#) must be connected to IW0 analog input on [home controller](#).  
 All other inputs are left for custom programming solutions (10 digital inputs IX0-IX7, IX8A, IX9B and 3 8-bit analog inputs IW1-IW3).

## Page 16 - Home controller outputs

QX0-QX4 outputs - can be used for radiator valves or to control other heating/cooling devices. Internal relay is used for valves, other loads are recommended to use an additional 16A installation relay.

In our plan we use 2 radiator valves (and 3 [Fan-coil controllers](#)).

QX5 output - is used for Air Conditioner.

QX6 output - is used for Boiler.

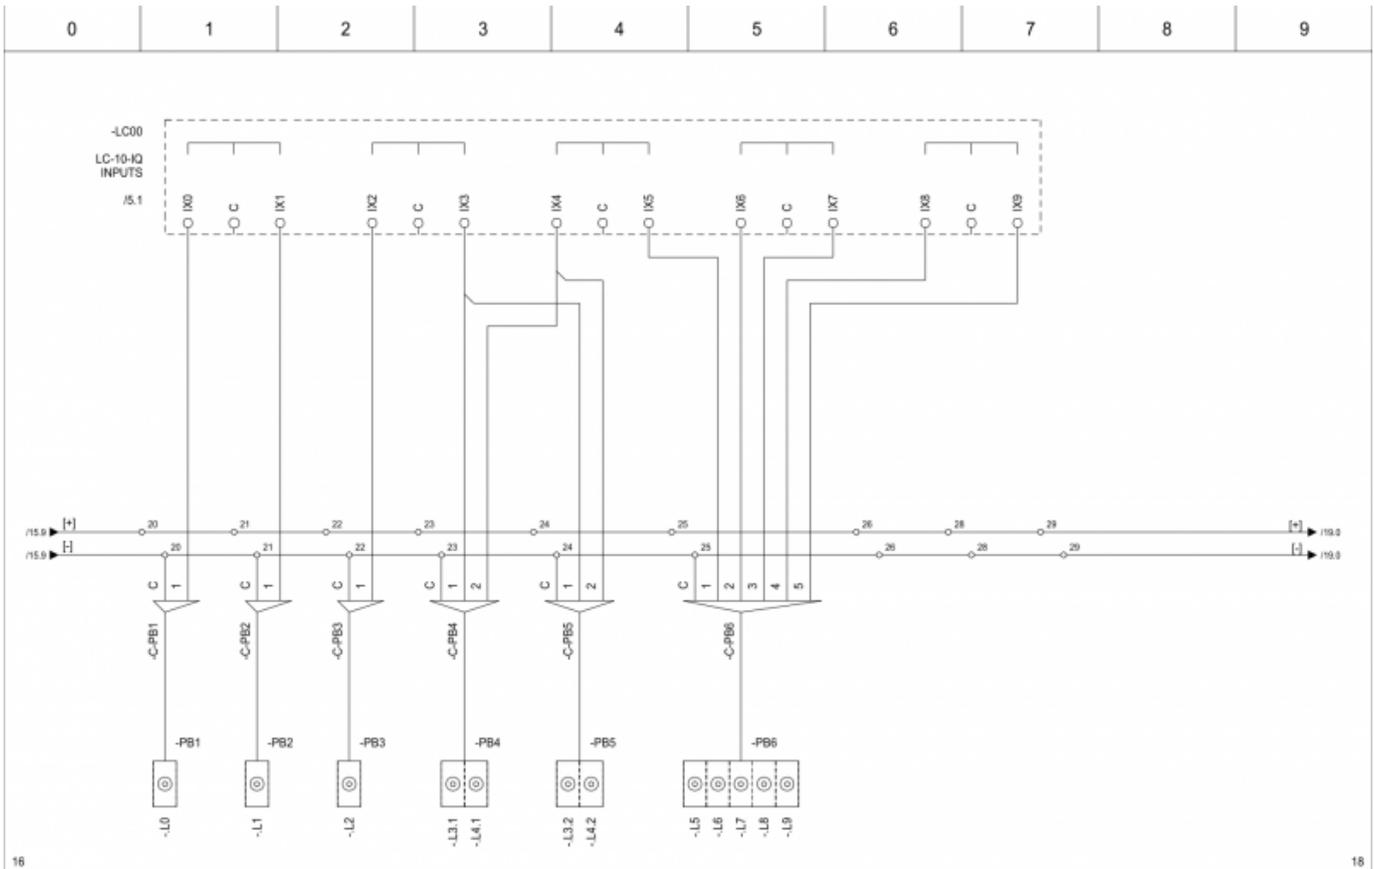

QX7 output - is used for Chiller.

All three outputs are connected to external installation relays (-K.A, -K.B and -K.C) .

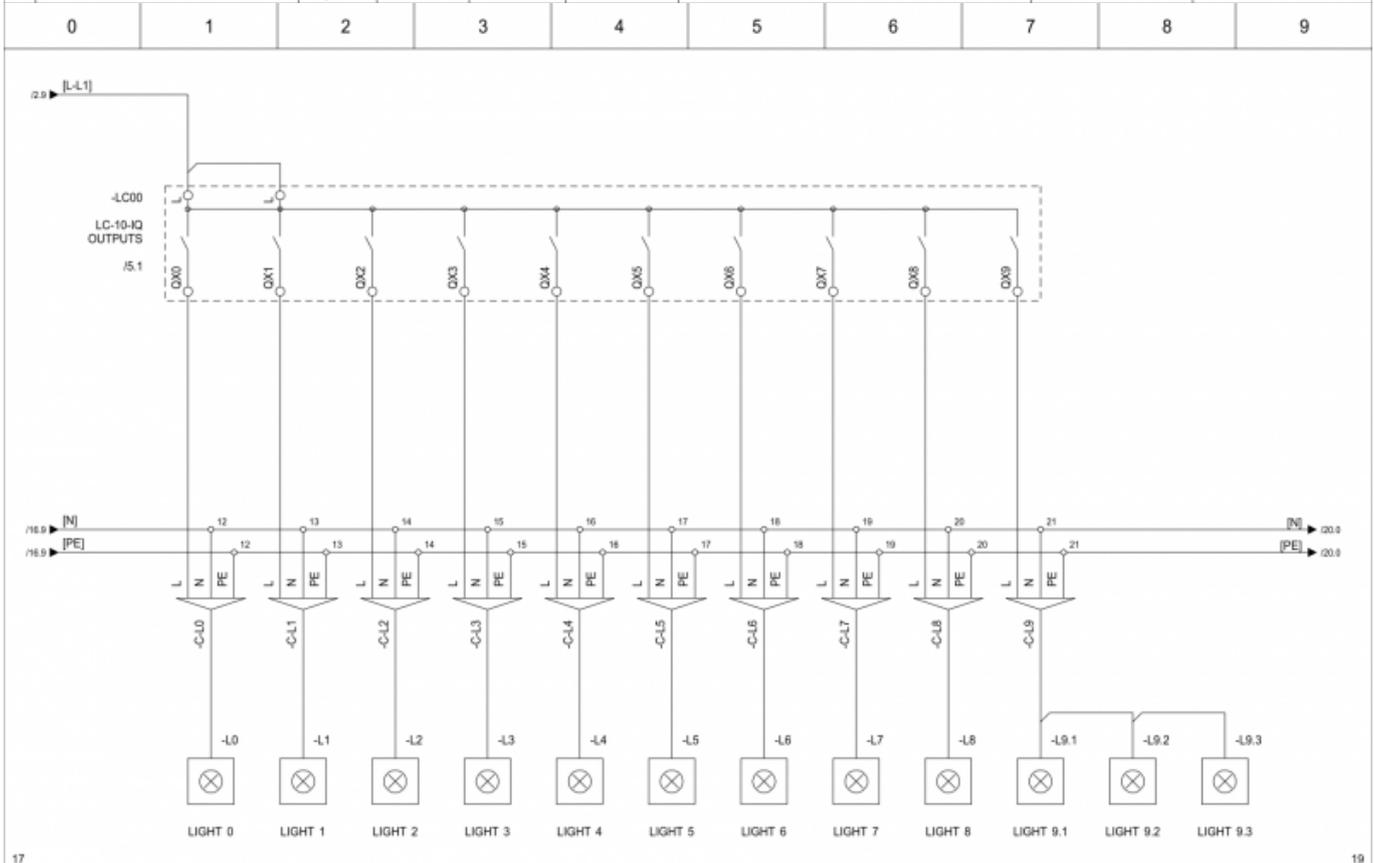

# Page 17-24 - Light controller

Lights and managed power sockets are connected to [Light controllers](#) .  
 Several button combinations are possible.  
 Managed power sockets should be connected through installation relays (-K12-K14, -K22-K23 and -K30-K33).
