2025/11/03 00:45 1/1 Power plant connection

PV inverter

Monitoring of PV Inverter is possible by two ways:

- 1. adding of power-sensor to measure produced electricity. How to add power sensor please see Power Sensor
- 2. connecting PV inverter by Modbus TCP to EVSE (only for SolarEdge inverters)

One-phase sensor PM1-E-D

- Connect communication bus (to only one power-sensor)
- In HEMS Configurator power-sensor should appear as a "new device"
- Press and hold the push-button on the power-sensor until it appears -SEt- on display
- In HEMS Configurator click on the " add" button next to the source or consumer that the sensor is measuring
- Connect communication bus to the next power-sensor and repeat procedure
